PROFESSIONAL SUMMARY

Systems Engineering student (9th semester) focused on Business Intelligence and data analysis, with hands-on experience in SQL, Python, Power BI and advanced Excel. I have built interactive dashboards and predictive models on large-scale datasets (6.7M records processed with Apache Spark), integrating cloud data pipelines (AWS). I care about data quality and integrity, turn business needs into actionable analytical solutions and communicate findings clearly to multidisciplinary teams and stakeholders. Knowledge of process automation (n8n), project management and software quality. Available immediately for a 6-month internship in Bogotá (on-site, hybrid or remote).

WORK EXPERIENCE

Web Developer — EH2 Ingeniería — Málaga, Spain (remote)
December 2025 – June 2026 | Full-time

- Designed and developed scalable, high-performance web solutions for the Spanish market, applying systems engineering principles to build efficient and reliable architectures.
- Defined the information architecture of dynamic platforms, structuring and prioritizing content for intuitive, user-centered navigation (UX).
- Turned complex business requirements into functional, conversion-oriented solutions, working remotely with international teams.
- Improved SEO (Search Engine Optimization) and WordPress implementation, analyzing site visibility and performance metrics to guide decisions.

Teaching Assistant — Artificial Intelligence and Cybersecurity — Ministry of Information and Communications Technologies of Colombia (MinTIC)
October 2025

- Supported students learning Artificial Intelligence and Cybersecurity topics, explaining complex technical concepts in a clear, practical and accessible way.
- Helped students build digital skills and apply what they learned, encouraging the adoption of technology tools.

Teaching Assistant — Information Security Fundamentals — Ministry of Information and Communications Technologies of Colombia (MinTIC)
August 2025

- Supported students learning key cybersecurity concepts: digital threats, best practices, data protection and responsible information handling.
- Contributed to a culture of information security and data-handling quality in the academic environment.

SELECTED PROJECTS

HealthAI Breast BDI — Developer — Breast cancer risk prediction with Big Data — Universidad de San Buenaventura
2026

- Processed about 6.7M records from the BCSC dataset with Apache Spark and trained a classification model in Scikit-learn to predict breast cancer risk.
- Built an epidemiological dashboard in Power BI to visualize KPIs and indicators, supporting the interpretation of results and decision-making.
- Integrated a FastAPI back end and a React + Vite front end, deployed on AWS (S3, Kinesis Firehose, EC2) with Docker.

GeoPol — Project Lead — Geographic Information Systems (GIS) and interface development
June 2024 – November 2024

- Guided the team in integrating and analyzing geospatial data with PostgreSQL/PostGIS, translating business needs into analytical solutions.
- Speaker at the Technology Congress of Universidad ECCI, where the project was presented, highlighting its potential social impact and contribution to public policy.

ISO_SECURE — Developer — ISO/IEC 27001 compliance platform — Universidad de San Buenaventura
2026

- Developed an ISMS platform aligned with ISO/IEC 27001:2022, with a KPI dashboard, incident management, ISO controls, risk assessment and auditing (React + Vite, FastAPI/Python, PostgreSQL/Supabase, JWT + RBAC authentication).
- Carried out threat modeling with the PASTA + STRIDE methodology (DFD, risk matrix, OWASP/ISO mapping) on a layered back-end architecture with a REST API.

Pulso — Developer — AI-powered cardiovascular health PWA
2026

- Built a cardiovascular health PWA in React with a metrics dashboard, 30-day trend charts (Recharts) and personalized AI analysis via streaming.
- Integrated AI-generated recipes and routines (Claude + Imagen 3) and persistence in Supabase, with a privacy-first approach (no account or personal data).

AgroPred — Front-End Developer — NASA Space Apps Challenge
October 2024

- Collaborated on an application that used genetic algorithms to predict optimal planting conditions in specific areas.
- Contributed to a project presented at the NASA Space Apps Challenge, highlighting the role of technology in agriculture and sustainability.

EDUCATION

- **B.S. in Systems Engineering** | Universidad de San Buenaventura, Bogotá, Colombia | 2022 – Present (9th semester)
- **Certificate Program in Project Management** | Politécnico de Colombia | 2025
- **Technical Degree in Multimedia Design and Integration** | Instituto Técnico Distrital Julio Flórez | 2019 – 2020

CERTIFICATIONS AND COURSES

- Data analytics for logistics processes | SENA | 2024
- Software quality in the development process | SENA | 2024
- English course | Smart Academia de Idiomas | 2025 – Present

TECHNICAL SKILLS

- **BI and data visualization:** Power BI (interactive dashboards, KPIs), advanced Excel (pivot tables, statistical analysis, predictive analysis), data visualization (Recharts)
- **Data and languages:** SQL, PostgreSQL/PostGIS, Python (Scikit-learn, Apache Spark), Java, data mining, web scraping, data quality and integrity
- **Cloud and back end:** AWS (S3, Kinesis Firehose, EC2), Docker, FastAPI, Supabase, REST APIs
- **Automation and web development:** n8n (workflow automation), React, HTML, CSS, JavaScript, WordPress, SEO, user experience (UX)
- **Management:** project management, software quality methodologies, technical communication

LANGUAGES

Spanish: native | English: elementary – intermediate (A2), currently studying
